

Beesly Scavenger Hunt Instructions

1. Bees are some of the most important pollinators and are essential to about 75% of the world's major food crops. Read about 8 quick tips that anyone can do to help support bees and keep them happy!
2. Search around for the eight pictures hidden throughout this location featuring these tips and Beesly, the Wisconsin Science Festival mascot.
3. Each picture will have a hidden letter for you to find. Once all 8 letters are found, unscramble them to spell a word.
4. Place the secret word after WiSciFest.org/ and go to that website for a fun surprise! For example, if the secret word was science, you would go to WiSciFest.org/science.

8 Fun Strategies to Help Bees Survive

1. Build a pollinator garden

Building a pollinator garden of specific nectar and pollen can help attract bees and provide a place to eat and take shelter.

3. Provide a bee bath

Bees can get very thirsty from collecting all their nectar. Providing a shallow dish with clean water gives bees the opportunity to take a refreshing drink.

5. Plant trees

Trees produce thousands of blossoms filled with nectar when they bloom, providing not just essential food, but also great habitats.

7. Support local beekeepers and organizations

Beekeepers and bee organizations work hard to protect the bees, one way to support them is by buying local honey and beeswax products.

2. Go pesticide free

Use organic products and natural solutions to pests rather than pesticides, fertilizers, and herbicides, which can be harmful to bees' sensitive systems.

4. Become a citizen scientist

Collect data by gathering photos and other information and join a global network on various forums like the iNaturalist app.

6. Build a bee condo

Besides honeybees, most other bees are solitary creatures and live underground or in hollow branches or stems. "Bee Condos" are easy to make or purchase and give bees a place to take up residence.

8. Support wildlife preservation efforts

Supporting preservation efforts helps protect bees' habitats and food sources, both things that are greatly in danger.
